

USB-C VGA Multiport Adapter - USB 3.0 Port - 60W PD

Product ID: CDP2VGAUACP

This USB-C VGA multiport adapter combines the capability of two single-function adapters, a USB-C video adapter and USB-C to USB adapter, into a portable docking station for your laptop. You can instantly connect to a VGA display and a USB 3.0 (Type-A) device, while also powering and charging your laptop using the same adapter.

With a secondary display connected to your laptop, you can multitask faster and easier. The USB-C adapter's VGA video output lets you create a dual-screen workstation comprised of your laptop's display and an additional VGA monitor or projector, in a boardroom or other professional environment.

With USB Power Delivery, you can power and charge your laptop by simply connecting the multiport adapter to your laptop's USB Type-C port, then connecting a USB Type-C power adapter.

The USB-C multiport adapter features a built-in USB-C cable and works with USB-C equipped MacBook, Chromebook and Windows laptops that support DisplayPort (DP) Alt Mode and USB Power Delivery.

Compact, lightweight design and rugged construction lets you take this USB-C video adapter anywhere you take your laptop.

Special Notes / Requirements

System and Cable Requirements	A host laptop with an available USB-C port (to ensure full adapter functionality, the host USB-C port must support USB Power Delivery 2.0 and DP alt mode). The multifunction adapter does not include a USB-C power adapter. Optional: the multifunction adapter can be used with a separate USB-C power adapter (for example, your laptop's USB-C based power adapter).
Note	Not all USB-C ports support the full functionality of the USB Type-C standard. Ensure that your host USB-C port supports USB Power Delivery 2.0 and DP alt mode.

The adapter can connect to a host laptop's USB-C port that doesn't support USB Power Delivery 2.0. However, in this configuration if a power adapter is connected to the multifunction adapter, it will not pass power through to your host laptop.

USB 3.0 is also known as USB 3.1 Gen 1; this connectivity standard offers speeds up to 5Gbps.
