

RS232 Serial Remote Control Interface Module for IP KVM

Product ID: RPORT

The RPORT Serial Remote Control Module lets you control an RS232 serial device remotely through your IP KVM switch as if it were installed locally.

The serial IP KVM module offers a unique way to expand the capability of your StarTech.com IP KVM switch by allowing you to connect a serial device such as: a router, managed switch, printer, or even serial console based Linux server and issue commands to it over the network.

You can also combine the RPORT device with the PCM815SHNA Remote Power Switch for complete, remote power control over your attached devices.

The module integrates with the security features of the IP KVM it is connected to, offering secure communication over protocols like SSH. You can also daisy-chain up to 16 R-Port units and control multiple serial devices through your KVM switch, for added flexibility.

Backed by a StarTech.com 2-year warranty and free lifetime technical support.

Certifications, Reports and Compatibility

Applications

- Control a serial device (router, managed switch, printer, or a serial console-based Linux server) as if you were right there in the room with them
- Daisy-chain up to 16 RPORT devices and control all of them using an interactive web interface

- Control your device locally via console, or remotely over the network

Features

- Connects an RS232 serial device to your StarTech.com IP KVM switch for remote control
- Supports daisy-chaining up to 16 modules
- Integrates with IP KVM security features, for secure remote control

Connector(s)

Warranty	2 Years
Other Interface(s)	2 - RJ-14 (6P4C)
	1 - DB-9 (9 pin, D-Sub)

Special Notes / Requirements

Note	Each serial device connects directly to the RPORT DB9 Serial interface (Gender Changers or Null Modem Adapter may be required), then an RJ-14 cable is connected between the RPORT and the IP KVM or additional RPORT devices
